

What is the Product

Behr® Premium Plus Kitchen & Bath Paint

What's nano about it?

- Nano-sized additives are placed in the latex paint to enhance its qualities. The type of additives is listed as proprietary.

How does it work?

- As the paint dries, the NanoGuard additives help create a harder, stronger layer.
- The nanoparticles penetrate into the drying surface to create a smoother and stronger coating.
- The nanoparticles guard the surface against grease, stains, water, and mildew.
- The paint is easily scrubbable so stains that do happen can be easily removed.

Does it have other applications?

- Any interior painted surface that you want to resist stains, water and mildew.

Price

- One quart is about \$13.00

Glossary

- Nanoparticles - a particle with at least one dimension of less than 200 nanometers.
- Proprietary— Exclusively owned; owned by a private individual or corporation under a trademark or patent.
